

A EUROPEAN WAY TO A SUSTAINABLE SOCIETY:

state-of-the-art and perspectives on circular economy
and the contribution of the University of Padua

Thursday, 23rd of January 2020, 14:00
"Aula Nievo" Palazzo Bo - Via VIII Febbraio 2, Padova

The aim of the event is to bring together the productive world, institutions, trade associations, professional associations and the social partners in general to discuss the opportunities of the European society's next transition from a linear economy to a circular economy and the role of the University of Padua in the design of highly innovative, interdisciplinary and strongly international educational paths, supporting the circular transition. The Round Table at the centre of the event, in particular, will be dedicated to the transition methods and technological developments for the entrepreneurial fabric, from the regional to the continental level, emphasizing the growth prospects for the whole European society

*Within this framework, to answer the formative need of training **professional figures with transversal and interdisciplinary proficiencies** to support the transition from a linear to a circular economic model, the University of Padova is furthermore promoting the activation of a new **Master's degree course** (2 years, 120 ECTS, held in English with a final stage in a company) entitled "**Sustainable Science & Technology for Circular Economy**".*
